PH O/C----

A new career opportunity is blowing in the wind at Midcity University.

The school has found a unique way to address America's energy challenges: windmills.

Take VO (:45 nat sound)-----

That's right...Midcity officials say the century's old technology can be used today to efficiently generate electricity and pump water.

Super: Midcity University/Today

The first of its kind course in the nation began today. Twenty five students are enrolled in the two week program and their first job is to build a windmill.

Windmill history, design, maintenance, and installation are among the subjects areas to be covered. Graduates will be able to work in rural communities where there's a shortage of qualified windmill technicians.

This novel course has drawn a lot of interest with some 175 people applying to get

Windmills VO (p.2)

in it. There's even international interest. A United Nations observer from Brazil is on hand to see if similar classes can be started in third world countries.

PH O/C tail-----

Enrollment is already underway at Midcity University for future windmill technology classes. Contact M-U's News Service for more information.
